Balance, main incomes and expenses, including unrealized profits from intra-group transactions are eliminated in full from the Interim Consolidated Financial Statements.

4.3 Transactions in foreign currency

Transactions in foreign currencies are translated at the exchange rate on the transaction date. Balances of foreign currency monetary items at the end of the financial year are translated at the exchange rate on that date.

Exchange rate differences arising during the year from foreign currency transactions are recorded in financial income or financial expenses. Exchange rate differences arising from revaluation of foreign currency items at the end of the fiscal year after offsetting the increase and decrease are recorded in financial income or financial expenses.

The exchange rate used to convert transactions in foreign currency is the actual exchange rate at the time of the transaction. The actual exchange rate for transactions in foreign currency is determined as follows:

- Actual transaction exchange rate when buying and selling foreign currencies (spot foreign currency purchase and sale contracts, forward contracts, futures contracts, options contracts, swap contracts) exchange rate signed in foreign currency purchase and sale contracts between the Company and the bank.
- If the contract does not specify the payment rate:

- + For receivables: the buying rate of the commercial bank where the Company designates the customer to make payment at the time the transaction occurs.
- + For payables: selling exchange rate of the commercial bank where the Company plans to transact at the time the transaction occurs.
- + For asset purchases or expenses paid immediately in foreign currency (not through payable accounts): Buying rate of the commercial bank where the Company makes payment.

The exchange rate used to re-evaluate the balance of foreign currency monetary items at the end of the fiscal period is determined according to the following principles:

- For foreign currency deposits at banks: foreign currency buying rate of the bank where the Company opens a foreign currency account.
- For foreign currency loans from banks: foreign currency selling rate of the bank where the Company opens a foreign currency account.
- For foreign currency monetary items classified as other assets: foreign currency buying rate of Joint Stock Commercial Bank for Foreign Trade of Vietnam - Dong Thap Branch (the Bank where the Company regularly transacts).
- For foreign currency monetary items classified as liabilities: foreign currency selling rate of the Bank with which the Company regularly transacts.

4.4 Cash and cash equivalents

Cash includes cash, demand deposits and cash in transit. Cash equivalents are short-term investments with a maturity of no more than 3 months from the date of investment, which are easily convertible to a known amount of cash and are subject to an insignificant risk of change in value at the reporting date.

4.5 Financial investments

Held to maturity investments

Investments are classified as held-to-maturity when the Company has the intention and ability to hold them until maturity. Held-to-maturity investments include term deposits.

Held-to-maturity investments are initially recognized at cost, which includes the purchase price and any costs associated with the transaction. After initial recognition, these investments are recognized at their recoverable amount. Interest income from investments held to maturity after the acquisition date is recognized in the Statement of Business Operations on an accrual basis. Interest earned before the Company holds the investment is deducted from the cost at the acquisition date.

When there is strong evidence that part or all of an investment may not be recovered and the amount of loss can be reliably determined, the loss is recorded in financial expenses in the year and the investment value is directly deducted.

Subsidiary company

A subsidiary is an enterprise controlled by the Company. Control is achieved when the Company has the power to govern the financial and operating policies of an investee enterprise so as to obtain benefits from its activities.

Affiliate company

An associate is an enterprise in which the Company has significant influence but not control over the financial and operating policies. Significant influence is the power to participate in the financial and operating policy decisions of the investee but not control over those policies.

Investments in subsidiaries are initially recorded at cost, including the purchase price or capital contribution plus costs directly related to the investment. In case of investment in non-monetary assets, the cost of the investment is recorded at the fair value of the non-monetary assets at the time of acquisition.

Dividends and profits from periods prior to the purchase of the investment are recorded as a reduction in the value of the investment itself. Dividends and profits from periods subsequent to the purchase of the investment are recorded as financial revenue. Dividends received in shares are only recorded as the number of shares increased, not the value of shares received at par value.

Provision for losses on investments in subsidiaries is made when the subsidiary makes a loss, with the provision equal to the difference between the actual capital contributions of the parties at the subsidiary and the actual equity multiplied by the Company's capital contribution ratio compared to the total actual capital contributions of the parties at the subsidiary.

Increases and decreases in the provision for investment losses in subsidiaries and associates must be set up at the end of the fiscal year and recorded in financial expenses.

4.6 Accounts receivable

Receivables are stated at carrying amount less allowance for doubtful debts. The classification of receivables as trade receivables and other receivables is made according to the following principles:

- Trade receivables reflect commercial receivables arising from purchase-sale transactions between the Company and buyers who are independent entities of the Company.
- Other receivables reflect non-commercial receivables not related to purchase and sale transactions.

The allowance for doubtful debts represents the estimated loss due to non-payment of receivables arising on the receivables balance at the balance sheet date.

- 30% of the value for overdue receivables from 06 months to less than 01 year.
- 50% of the value for overdue receivables from 01 to less than 02 years.
- 70% of the value for overdue receivables from 02 years to less than 03 years.
- 100% of the value for receivables overdue for 03 years or more.

For receivables that are not overdue but are unlikely to be recovered: establish provisions based on expected loss level.

Increases and decreases in the balance of the provision for doubtful debts that must be set up at the end of the fiscal year are recorded in business administration expenses.

4.7 Inventory

Inventories are stated at cost lower than net realizable value.

The cost of inventories is determined as follows:

- Raw materials, goods: include purchase costs and other directly relevant costs incurred in bringing inventories to their present location and condition.
- Finished goods: includes the cost of raw materials, direct labor and directly related general manufacturing costs allocated based on normal levels of activity.
- Work-in-progress production costs: include main raw material costs, direct labor costs and general production costs directly related to the product manufacturing process.

Net realizable value is the estimated selling price of inventories in the ordinary course of business, less the estimated costs of completion and the estimated costs necessary to make the sale.

Inventories are valued using the weighted average method and accounted for using the perpetual inventory method.

Provision for inventory devaluation is established for each inventory item whose original cost is greater than its net realizable value. For unfinished services, provision for devaluation is calculated for each type of service with a Consolidated price. Increases and decreases in the balance of provision for devaluation of inventory that must be established at the end of the fiscal year are recorded in cost of goods sold.

4.8 Prepaid expenses

The expenses incurred but related to operating results of several accounting periods are recorded as prepaid expenses and are allocated to the operating results in the following accounting periods.

The calculation and allocation of long-term prepaid expenses to operating expenses in each accounting period should be based on the nature of those expenses to select a reasonable allocation method and criteria.

Types of prepaid expenses include:

- Tools and supplies include assets which are possessed by the Company in an ordinary course of business, with historical cost of each asset less than VND 30 million and therefore not eligible for recording as fixed asset under current legal regulations. The historical cost of tools and supplies are allocated on the straight-line basis from 01 year to 03 years.
- Other prepaid expenses are recorded at their historical costs and allocated on the straight-line basis over their useful life.

4.9 Tangible fixed assets

Tangible fixed assets are stated at cost less accumulated depreciation. The cost of tangible fixed assets includes all costs incurred by the Company to acquire the fixed assets up to the time the assets are ready for use. Expenses incurred after initial recognition are only recorded as an increase in the cost of fixed assets if it is certain that these costs will increase future economic benefits from the use of the assets. Expenses incurred that do not satisfy the above conditions are recorded as production and business expenses in the year.

When tangible fixed assets are sold or disposed of, their cost and accumulated depreciation are eliminated from the accounts and any gain or loss resulting from their disposal is recognised as income or expense in the year. Tangible fixed assets are depreciated using the straight-line method over their estimated useful lives.

Tangible fixed assets are depreciated using the straight-line method over their estimated useful lives. The depreciation years for various types of tangible fixed assets are as follows:

<u>Type of fixed asset</u>	<u>Time (year)</u>
Houses, architectural objects	04 - 30
Machinery and equipment	03 - 10
Means of transport, transmission equipment	04 - 10
Management equipment and tools	05
Other fixed assets	

Financial lease fixed assets

Investment property is the right to use land, house, part of house or infrastructure owned by the Company or finance leased for the purpose of earning income from renting or waiting for capital appreciation. Investment property is stated at original cost less accumulated depreciation. The original cost of investment property is the total cost that the Company has to pay or the fair value of the consideration given to acquire the investment property up to the time of purchase or completion of construction.

Expenses related to investment real estate incurred after initial recognition are recorded as expenses, unless these expenses are likely to make the investment real estate generate more economic benefits in the future than the initially assessed level of performance, then they are recorded as an increase in original cost.

When investment property is sold, its cost and accumulated depreciation are written off and any resulting gain or loss is recognized as income or expense for the year.

Transfers from owner-occupied property or inventories to investment property occur only when the owner stops using the property and begins operating leases to others or at the end of the construction phase. Transfers from investment property to owner-occupied property or inventories occur only when the owner starts using the property or develops it with a view to selling it. Transfers from investment property to owner-occupied property or inventories do not change the cost or carrying amount of the property at the date of transfer.

Investment properties used for rental purposes are depreciated using the straight-line method over their estimated useful lives. The depreciation years of investment properties are as follows:

Asset type

Houses, architectural objects

4.10 Intangible fixed assets

Intangible fixed assets are stated at cost less accumulated depreciation.

The original cost of intangible fixed assets includes all costs incurred by the Company to acquire the fixed assets up to the time the asset is ready for use. Expenses related to intangible fixed assets incurred after initial recognition are recognized as production and business expenses in the period, unless these expenses are associated with a specific intangible fixed asset and increase the economic benefits from these assets.

When tangible fixed assets are sold or disposed of, their cost and accumulated depreciation are eliminated from the accounts and any gain or loss resulting from their disposal is recognized as income or expense in the year.

The Company's intangible fixed assets include:

Land use rights

Land use rights are all actual costs that the Company has spent directly related to the land used, including: money spent to obtain land use rights, costs for compensation, site clearance, site leveling, registration fees, etc. Land use rights are depreciated using the straight-line method over the time recorded on the land use rights; land use rights with indefinite duration are not depreciated.

Software program

Costs relating to computer software programs that are not an integral part of the related hardware are capitalized. The cost of computer software is the total cost incurred by the Company up to the date the software is put into use. Computer software is amortized on a straight-line basis over 03 years.

4.11 Cost of unfinished construction

Construction in progress reflects costs directly related (including interest expenses related to the Company's accounting policies) to assets under construction, machinery and equipment being installed for production, leasing and management purposes as well as costs related to repairs of fixed assets in progress. These assets are recorded at original cost and are not depreciated.

4.12 Debts payable

Liabilities are recognized for amounts to be paid in the future for goods and services received.

The classification of payables as trade payables and other payables is made according to the following principles:

- Trade payables reflect commercial payables arising from transactions of purchasing goods, services, assets and the seller is an independent entity of the Company, including payables when importing through consignees.
- Payable expenses reflect amounts payable for goods and services received from sellers or provided to buyers but not yet paid due to lack of invoices or insufficient accounting records and documents, and amounts payable to employees for leave wages, production and business expenses that must be accrued in advance.
- Other payables reflect non-trade payables not related to purchase, sale or provision of goods or services.

4.13 Owner's equity

Owner's capital contribution

Owner's equity is recorded according to the actual capital contributed by shareholders.

Retained earnings are used to present the Company's operating results (profit, loss) after corporate income tax and profits appropriation or loss handling of the Company.

Other capital of the owner

Other capital is formed by supplementing from business performance, revaluation of assets and the remaining value between the fair value of donated, presented, and sponsored assets after deducting taxes payable (if any) related to these assets.

Other capital is formed by supplementing from business performance, revaluation of assets and the remaining value between the fair value of donated, presented, and sponsored assets after deducting taxes payable (if any) related to these assets.

4.14 Profit distribution

Profit after corporate income tax is distributed to shareholders after setting aside funds according to the Company's Charter as well as legal regulations and approved by the General Meeting of Shareholders.

The distribution of profits to shareholders takes into account non-cash items in undistributed earnings that may affect cash flows and the ability to pay dividends, such as gains from revaluation of capital contributions, gains from revaluation of monetary items, financial instruments and other non-cash items.

Profit distribution is recognized as a liability upon approval by the General Meeting of Shareholders.

4.15 Revenue from sales of goods and rendering of services

Revenue is recognized to the extent that it is probable that the economic benefits will flow to the Company and the revenue can be reliably measured regardless of when payment is being made. Revenue is measured at the fair value of the consideration received, excluding discounts, rebates, and sales returns. The following specific recognition conditions must also be met when recognizing revenue:

Revenue from sales of goods

Revenue from sales of goods is recognized when all of the following conditions are simultaneously satisfied:

- The majority of risks and benefits associated with the right to own the products or goods have been transferred to the buyer;
- The company no longer holds the right to manage the goods as the owner of the goods or the right to control
- Revenue is determined relatively certainly.
- The Company has obtained or will obtain economic benefits associated with the sale transaction.
- Identify the costs associated with a sales transaction.

Revenue from service provision

Revenue from a service transaction is recognised when the outcome of the transaction can be measured reliably. In cases where services are performed over several periods, revenue is recognised in the year based on the results of the work completed at the end of the fiscal year. The outcome of a service transaction is recognised when all of the following conditions are met.

- Revenue is determined with relative certainty.
- Ability to obtain economic benefits from the transaction of providing that service.
- Determine the portion of work completed at the end of the fiscal year.
- Determine the costs incurred for the transaction and the costs to complete the transaction to provide that service.

Revenue from operating lease assets

Revenue from operating lease assets is recognized on a straight-line basis over the lease term. Rental income from multiple periods is allocated to revenue in accordance with the lease term.

Financial income

Financial incomes include income from interest and other financial gains by the Company shall be recognised when the two (2) conditions are satisfied:

- It is probable that the economic benefits associated with the transaction will flow to the Company;
- The amount of the revenue can be measured reliably.

Interest

Interest is recognized on an accrual basis, determined on the balance of deposit accounts and the actual interest rate for each period.

4.16 Revenue deductions

Revenue deductions including trade discounts, sales returns, sales discounts arising in the same period of product and service consumption are adjusted to reduce revenue of the arising period.

In case products and services have been consumed in previous years, but only this year have trade discounts, returned goods, or sales discounts, revenue reductions are recorded according to the following principles:

- * If trade discounts, returned goods, and sales discounts arise before the issuance of the Financial Statements: reduce revenue on the Financial Statements of this year.
- * If trade discounts, returned goods, and sales discounts arise after the date of issuance of the Financial Statements: record a reduction in revenue on the Financial Statements of the following year.

4.17 Cost of goods sold and serviced rendered

Cost of goods sold and services rendered are cost of finished goods, merchandises, materials sold or services rendered during the period, and recorded on the basis of matching with revenue and on a prudence basis. Cases of loss of materials and goods exceeded the norm, abnormal expenses and losses of inventories after deducting the responsibility of collective and individuals concerned, etc. is recognized fully and promptly into cost of goods sold in the period.

4.17 Borrowing costs

Items recorded into financial expenses comprise:

- * Borrowing costs;
- * Losses from sales of foreign currency, exchange loss, etc.

The above items are recorded by the total amount arising in the period without offsetting against financial income.

For general borrowings used for the purpose of investment in construction or production of unfinished assets, the capitalized borrowing costs are determined according to the capitalization rate for the weighted average cumulative costs incurred for investment in basic construction or production of that asset. The capitalization rate is calculated according to the weighted average interest rate of the outstanding borrowings during the year, except for Consolidated borrowings serving the purpose of forming a specific asset.

4.18 Expenses

Expenses are amounts that reduce economic benefits and are recognized at the time the transaction occurs or when it is relatively certain that they will arise in the future, regardless of whether money has been spent or not.

Expenses and revenues generated by them must be recorded simultaneously according to the matching principle. In case the matching principle conflicts with the prudence principle, expenses are recorded based on the nature and provisions of accounting standards to ensure that transactions are reflected honestly and reasonably.

4.19 Corporate income tax

Corporate income tax expense for the period is current corporate income tax.

Current income tax

Current income tax is the tax that is calculated on taxable income. Taxable income differs from accounting profit due to adjustments for non-deductible expenses as well as adjustments for non-taxable income and losses carried forward.

The Company's tax reports will be examined by the tax authorities. Due to the application of tax laws to each type of business and the interpretation, understanding and acceptance in many different ways, the figures in the financial statements may differ from the figures of the tax authorities.

Current corporate income tax rate

The Company applies the corporate income tax rate of 20% for the operating activities which has taxable income for the accounting period from 01/01/2024 to 30/06/2024.

4.20 Related parties

The parties are regarded as related parties if that party has the ability to control or significantly influence the other party in making decisions about the financial policies and activities. The Company's related parties include:

Companies, directly or indirectly through one or more intermediaries, having control over the Company or being under the control of the Company, or being under common control with the Company, including the parent Company, subsidiaries and associates;

Individuals, directly or indirectly, holding voting power of the Company that have a significant influence on the Company, key management personnel, the close family members of these individuals;

Enterprises that the above-mentioned individuals directly or indirectly hold an important part of the voting power or have significant influence on these enterprises.

In considering the relationship of related parties to serve for the preparation and presentation of the Interim Consolidated Financial Statements, the Company should consider the nature of the relationship rather than the legal form of the relationship.

The following entities are considered to be related parties:

Object name	Relationship
Member of Board of Directors, General Director	Key member

4.21 Segment information

A segment is a distinguishable component of the Company that is engaged in providing an individual or group of related products or services (business segment), or providing products or services within a particular economic environment (geographical segment). Each segment is subject to risks and returns that are different from other ones.

Segment information should be prepared in conformity with the accounting policies adopted for preparing and presenting the Financial Statements of the Company in order to help users of financial statements better understand and make more informed judgements about the Company as a whole.
