2. FINANCIAL YEAR AND CURRENCY UNIT USED IN ACCOUNTING

2.1 Financial year

The period started from 1 January 2025 to 31 March 2025 every year.

2.2 Currency unit used in accounting:

The currency unit used in accounting is the Vietnamese Dong (VND) as the primary transactions are conducted in VND.

3. APPLICABLE ACCOUNTING STANDARDS AND REGIME

3.1 Accounting regime

The company applies the accounting regime for enterprises as issued under Circular No. 200/2014/TT-BTC dated December 22, 2014, by the Minister of Finance, guiding the accounting regime for enterprises and related amended circulars.

3.2 Statement On The Compliance To Accounting Standards And Accounting Regime

The Executive Management ensures compliance with the requirements of Vietnamese Accounting Standards and the Corporate Accounting Regime issued under Circular No. 200/2014/TT-BTC dated December 22, 2014, as well as other circulars guiding the implementation of accounting standards issued by the Ministry of Finance in the preparation of the separate financial statements.

4. ACCOUNTING POLICIES APPLIED

The accompanying notes are an integral part of these separate interim financial statements

4.1 Basis for the Preparation of the Separate Financial Statements

The separate financial statements for the financial period ended March 31, 2025, are prepared on an accrual basis (except for information related to cash flows).

4.2 Foreign Currency Transactions

Foreign currency transactions are translated into the functional currency at the exchange rates prevailing on the transaction dates. Monetary items denominated in foreign currencies as of the end of the accounting period are revalued at the exchange rates on that date.

Exchange rate differences arising during the year from foreign currency transactions are recognized in financial income or financial expenses. Exchange rate differences resulting from the revaluation of monetary items denominated in foreign currencies at the end of the accounting period, after offsetting gains and losses, are recorded as financial income or financial expenses.

The exchange rate used for converting foreign currency transactions is the accounting exchange rate set at the beginning of each month, based on the selling exchange rate of the Joint Stock Commercial Bank for Foreign Trade of Vietnam (Vietcombank), as the majority of the Company's foreign currency transactions are conducted with this bank.

At the financial statement closing date, the Company revalues exchange rate differences of monetary items denominated in foreign currencies using the exchange rates published on the same date by the Joint Stock Commercial Bank for Foreign Trade of Vietnam.

4.3 Cash And Cash Equivalents

Cash includes cash on hand, demand deposits at banks, and cash in transit. Cash equivalents are short-term investments with original maturities of no more than three months that are readily convertible into a known amount of cash and subject to an insignificant risk of changes in value.

4.4 Financial Investments

❖ Trading Securities

An investment is classified as trading securities when it is held for the purpose of trading to generate profits.

Trading securities are recorded at cost. The cost of trading securities is determined based on the fair value of payments at the transaction date, including transaction-related expenses.

The recognition of trading securities occurs when the Company obtains ownership rights, specifically:

- For listed securities: recognized at the transaction matching date (T+0).
- For unlisted securities: recognized at the official ownership date as regulated by law.

Interest, dividends, and profits from prior periods before the purchase of trading securities are deducted from the value of the trading securities. Interest, dividends, and profits from periods after the purchase are recognized as revenue. Dividends received in the form of additional shares are tracked as an increase in share quantity and not recognized at value/nominated value.

Provisions for the devaluation of trading securities are made for each type of market-traded security that has a market price lower than its original cost. The fair value of listed trading securities on the stock market or traded on the UPCOM exchange is determined as the closing price on the last day of the accounting period. If no trading occurs on the final day of the accounting period, the fair value is based on the closing price of the most recent trading session prior to the end of the period.

Adjustments to the provision for the devaluation of trading securities at the end of the accounting period are recognized in financial expenses.

❖ ***Held-to-Maturity Investments***

An investment is classified as held-to-maturity if the Company has the intention and ability to hold it until its maturity date. Held-to-maturity investments include term deposits at banks (including treasury bills and promissory notes), bonds, preferred shares requiring redemption at a specific future date by the issuer, loans held until maturity to earn periodic interest, and other held-to-maturity investments.

Held-to-maturity investments are initially recorded at cost, including purchase costs and transaction-related expenses. After initial recognition, these investments are recorded at their recoverable value. Interest income from held-to-maturity investments after the purchase date is recognized in the Income Statement on an accrual basis. Interest accrued before the Company acquires the investment is deducted from the initial cost at the time of purchase.

If there is clear evidence that a portion or the entirety of an investment is irrecoverable and the loss can be reliably determined, the loss is recognized in financial expenses for the year and directly deducted from the investment's value.

❖ ***Loans***

Loans are recorded at cost, net of allowances for doubtful debts. Allowances for doubtful debts are established based on estimated potential losses.

❖ ***Investments in Subsidiaries, Associates, and Joint Ventures***

Subsidiaries

A subsidiary is an entity controlled by the Company. Control is achieved when the Company has the ability to direct the financial and operating policies of the investee to obtain economic benefits from its activities.

Associates

An associate is an entity over which the Company has significant influence but does not have control over its financial and operating policies. Significant influence is demonstrated by the ability to participate in decisions regarding financial and operating policies but without controlling these policies.

Investments in associates are initially recognized at cost, which includes the purchase price or capital contributions along with direct transaction costs. In the case of non-cash asset investments, the cost of the investment is determined based on the fair value of the non-cash assets at the transaction date.

Dividends and profits earned in periods before the acquisition of the investment are deducted from the investment's value. Dividends and profits earned in periods after the acquisition are recognized as revenue. Dividends received in the form of additional shares are tracked as an increase in share quantity and are not recognized at value/nominated value.

Allowances for investment losses in associates are established when the associate incurs losses. The provision is calculated as the difference between the actual contributed capital and the actual equity, multiplied by the Company's ownership percentage in the associate. If the associate prepares consolidated financial statements, these are used as the basis for determining the allowance for investment losses.

Adjustments to allowances for investment losses in associates at the end of the accounting period are recognized in financial expenses.

Investments in Equity Instruments of Other Entities

Investments in equity instruments of other entities include investments where the Company does not have control, joint control, or significant influence over the investee.

These investments are initially recorded at cost, including the purchase price or capital contributions and direct transaction costs. Dividends and profits earned in periods before the acquisition are deducted from the investment's value. Dividends and profits earned in periods after the acquisition are recognized as revenue. Dividends received in the form of additional shares are tracked as an increase in share quantity and are not recognized at value/nominated value.

Allowances for investment losses in equity instruments of other entities are established as follows:

- For investments in listed shares or those with reliably determinable fair values, allowances are based on the market value of the shares.
- For investments without determinable fair values at the reporting date, allowances are calculated based on the investee's losses. The provision is determined as the difference between the actual contributed capital and the actual equity, multiplied by the Company's ownership percentage in the investee.

Adjustments to allowances for investment losses in equity instruments of other entities at the end of the accounting period are recognized in financial expenses.

4.5 Receivables

Accounts receivable are presented at their carrying amount, less any allowance for doubtful accounts.

Customer receivables, prepaid amounts to suppliers, intercompany receivables, and other receivables at the reporting date are classified as follows:

- Receivables with a collection or payment period of less than one year (or within a business operating cycle) are classified as Current Assets;
- Receivables with a collection or payment period exceeding one year (or beyond a business operating cycle) are classified as Non-Current Assets.

Allowance for Doubtful Accounts

The allowance for doubtful accounts reflects the estimated loss in value of receivables that may not be collected due to the possibility of non-payment by customers, as of the date of preparation of the Financial Statements.

The allowance for doubtful accounts is created in accordance with the provisions of Circular 48/2019/TT-BTC dated August 8, 2019, issued by the Ministry of Finance, which provides guidelines for the establishment and use of allowances for inventory write-downs, losses on financial investments, doubtful receivables, and product, goods, and construction warranty liabilities in enterprises. An allowance for doubtful accounts is provided for receivables overdue by six months or more, or those that are unlikely to be collected due to the debtor's liquidation, bankruptcy, or similar financial difficulties.

Any increase or decrease in the allowance for doubtful accounts as of the end of the accounting period is recognized as an administrative expense.

4.6 Inventories

Inventories are recognized at the lower of cost and net realizable value.

The cost of inventories is determined as follows:

- Raw materials, goods: Includes purchase costs and other directly attributable costs incurred to bring the inventory to its current location and condition.
- Finished goods: Includes costs of raw materials, direct labor, and overhead costs that are allocated based on normal operating levels, as well as direct costs and indirect costs incurred during the production process.
- Work-in-progress: Includes only the costs of direct materials.

Net realizable value is the estimated selling price of inventories in the ordinary course of business, less the estimated costs to complete and the estimated costs necessary to make the sale.

Inventory values are calculated using the weighted average method on a monthly basis and are recorded using the periodic inventory method.

An allowance for inventory write-down is made for each inventory item where the cost exceeds its net realizable value. For services in progress, the provision for write-down is calculated based on each type of service with a separate price. Any increase or decrease in the allowance for inventory write-down as of the end of the accounting period is recognized in the cost of goods sold.

4.7 Prepaid Expenses

Prepaid expenses represent actual expenditures incurred that relate to the operational results of multiple accounting periods. The Company's prepaid expenses include the following:

Tools and equipment

Tools and equipment put into use are allocated to expenses on a straight-line basis over a period not exceeding three years.

Fixed asset repairs

Significant one-time repair costs of fixed assets are allocated to expenses on a straight-line basis over a period not exceeding three years.

Other expenses

Other expenses include costs such as automobile insurance and accident insurance for employees. These expenses are allocated on a straight-line basis over the corresponding duration for each expense category.

4.8 Operating leases

Leases are classified as operating leases when substantially all risks and rewards incidental to ownership of the leased assets remain with the lessor. Operating lease expenses are recognized on a straight-line basis over the lease term, irrespective of the payment schedule

4.9 Tangibles fixed assets

Tangible fixed assets are presented at cost less accumulated depreciation. The cost of tangible fixed assets includes all expenses incurred by the Company to bring the asset to a condition suitable for its intended use. Subsequent expenditures are only capitalized if they are certain to increase the future economic benefits associated with the asset. Other expenditures that do not meet these criteria are recognized as operating expenses in the period incurred.

When tangible fixed assets are sold or disposed of, their cost and accumulated depreciation are derecognized, and any resulting gain or loss is included in the income or expense for the year.

Tangible fixed assets are depreciated on a straight-line basis over their estimated useful lives. The estimated useful lives of various asset categories are as follows:

Building and structure	5 - 10 years
Machinery and equipment	5 - 10 years
Means of transportation	5 - 7 years
Office equipment	3 - 5 years

4.10 Leased Fixed Assets

Leases are classified as finance leases when substantially all risks and rewards associated with ownership of the asset are transferred to the lessee. Leased fixed assets are presented at cost less accumulated depreciation. The cost of leased fixed assets is the lower of the fair value of the leased asset at the inception of the lease or the present value of the minimum lease payments. The discount rate used to calculate the present value of minimum lease payments is either the implicit interest rate in the lease agreement or the borrowing rate at the lease inception if the implicit rate cannot be determined.

Leased fixed assets are depreciated on a straight-line basis over their estimated useful lives. If the Company does not have reasonable assurance of obtaining ownership of the asset at the end of the lease term, the asset is depreciated

over the shorter of the lease term or its estimated useful life. The estimated useful lives of leased fixed asset categories are as follows:

Building and structure	5 - 10 years
Machinery and equipment	5 - 10 years
Means of transportation	5 - 7 years
Office equipment	3 - 5 years

4.11 Construction in progress

Construction in progress represents costs directly attributable to assets under construction, including relevant borrowing costs in accordance with the Company's accounting policy. These assets may include buildings, machinery, and equipment being installed for production, leasing, or administrative purposes, as well as costs related to ongoing repairs of fixed assets. These assets are recorded at historical cost and are not subject to depreciation.

4.12 Liabilities and accrued expenses

Liabilities, including trade payables, intercompany payables, other payables, and borrowings, are classified as follows at the reporting date:

- **Current liabilities:** Liabilities with settlement terms of less than one year or within the operating cycle.
- **Non-current liabilities:** Liabilities with settlement terms exceeding one year or the operating cycle.

Accrued expenses include actual costs that have not yet been incurred but are allocated in advance to the production and operating expenses of the reporting period. This ensures that the actual costs, when incurred, do not cause significant fluctuations in production and operating expenses, adhering to the principle of matching revenues and expenses. If discrepancies arise between the accrued amounts and the actual costs incurred, adjustments are made to either increase or decrease the expenses accordingly.

4.13 Ordinary Bonds

The carrying value of ordinary bonds is presented net of issuance costs, based on their nominal value. Issuance costs are amortized evenly over the bond's term.

4.14 Shareholders' Equity

Contributed

Capital

Contributed capital is recognized based on the actual amount of capital contributed by shareholders.

Share

Premium

Share premium is recognized as the difference between the issuance price and the par value of shares during initial and additional issuances, the difference between the resale price and the book value of treasury shares, and the equity component of convertible bonds upon maturity. Direct costs associated with additional share issuance or the resale of treasury shares are deducted from the share premium.

Treasury

Shares

When the Company repurchases its own shares, the payment, including transaction-related costs, is recognized as treasury shares and presented as a deduction in shareholders' equity. Upon resale, the difference between the resale price and the book value of the treasury shares is recorded under the "Share Premium" account.

4.15 Profit Distribution

Profit after corporate income tax is distributed to shareholders after setting aside reserves in accordance with the Company's Charter and legal requirements, and upon approval by the General Meeting of Shareholders.

Profit distribution considers non-monetary items in retained earnings that may impact cash flow and dividend payment capacity, such as gains from the revaluation of contributed assets, revaluation of monetary items, financial instruments, and other non-monetary components.

Dividends are recognized as liabilities once approved by the General Meeting of Shareholders and after a dividend payment notice is issued.

4.16 Revenue and Income Recognition

Revenue from Sales of Goods and Finished Products

Revenue from the sale of goods and finished products is recognized when the following conditions are met:

- The Company has transferred the majority of the risks and rewards associated with ownership of the products or goods to the buyer.
- The Company no longer retains managerial involvement or control over the goods.
- The revenue can be measured reliably.
- The Company has received or will receive economic benefits from the transaction.
- The related costs of the sales transaction can be measured reliably.

Revenue from Rendering of Services

Revenue from service transactions is recognized when the outcome of the transaction can be measured reliably. For services performed over multiple periods, revenue for the period is recognized based on the proportion of work completed by the end of the accounting period. The outcome of a service transaction is determined when all the following conditions are met:

- Revenue can be measured reliably.
- It is probable that economic benefits will be obtained from the service transaction.
- The stage of completion of the service at the end of the accounting period can be determined reliably.
- The costs incurred for the transaction and the costs required to complete the service transaction can be reliably measured.

Interest

Interest income is recognized on an accrual basis, determined based on the balance of deposit accounts and the actual interest rates for each period.

4.17 Borrowing Costs

Borrowing costs include interest on loans and other directly related expenses.

- Borrowing costs are expensed as incurred unless they relate directly to the investment, construction, or production of assets under development that require a substantial period (over 12 months) to be ready for intended use or sale, in which case they are capitalized.
- For specific loans used for constructing fixed assets or investment properties, interest is capitalized even if the construction period is under 12 months.
- Any income earned from the temporary investment of borrowed funds is deducted from the capitalized cost of the related asset.

4.18 Corporate Income Tax

Current Income Tax

Current income tax is calculated based on taxable income. Taxable income differs from accounting profit due to adjustments for temporary differences, non-deductible expenses, non-taxable income, and the use of carried-forward tax losses.

Tax returns are subject to review by tax authorities. Due to the complexity of tax laws and varying interpretations, the financial statement figures may differ from those determined by tax authorities.

4.19 Related Parties

Parties are considered related if one party has the ability to control or significantly influence the other party's financial and operating policies. Parties are also related if they are under common control or share significant influence.

In determining related party relationships, the substance of the relationship is prioritized over its legal form.

4.20 Segment Reporting

Business Segments

Business segments are distinguishable components engaged in producing or providing goods or services and subject to different risks and economic returns compared to other business segments.

Geographical Segments

Geographical segments are distinguishable components engaged in producing or providing goods or services within a specific economic environment, subject to different risks and economic returns compared to business operations in other economic environments.
