The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)*Joint ventures and affiliated companies:*

<i>Company name</i>	<i>Head office address</i>	<i>Main activities</i>	<i>Proportion actual capital contribution</i>	<i>Ratio as stated in the Business Registration Certificate</i>
KLW Vietnam Garment Joint Stock Company	Xuan Thuong 1 residential area, Phuc Yen Ward, Phu Tho Province, Vietnam	Garment manufacturing	48%	48%

Subordinate units:

<i>Unit Name</i>	<i>Address</i>	<i>Main activities</i>
Nagakawa Group Joint Stock Company Hanoi Branch	3rd Floor, Gold Tower Building, 275 Nguyen Trai Street, Thanh Xuan Ward, Hanoi City, Vietnam	Retail and wholesale of electronic equipment, components, and household goods.

7. **Statement on the comparability of financial statements:** The interim financial statements for the first six months of the fiscal year ending December 31, 2026 are fully consistent and comparable with the interim financial statements for the first six months of the fiscal year ending December 31, 2025 and the financial statements for the fiscal year ending December 31, 2025.

II. FISCAL YEAR, CURRENCY USED IN ACCOUNTING**1. Fiscal year**

fiscal year begins on January 1st and ends on December 31st each year.

2. Currency used in accounting

The currency used in accounting is the Vietnamese Dong (VND) because most receipts and disbursements are conducted in VND.

III. APPLICABLE ACCOUNTING STANDARDS AND REGULATIONS**1. Accounting system applied**

The company applies the Vietnamese Enterprise Accounting System issued under Circular No. 99/2025/TT-BTC dated October 27, 2025, of the Minister of Finance and other circulars guiding the implementation of accounting standards and regulations of the Ministry of Finance.

2. Statement on compliance with accounting standards and accounting regulations

The Board of Directors assures that it has complied with the requirements of accounting standards and the Vietnamese Enterprise Accounting System issued under Circular No. 43/2026/TT-BTC dated April 20, 2025, of the Minister of Finance, as well as the guiding circulars of the Ministry of Finance on the implementation of accounting standards and systems in the preparation of financial statements.

3. Accounting method applied

The company uses a computerized general journal accounting system.

IV. APPLICABLE ACCOUNTING POLICIES**1. Basis for preparing consolidated financial statements**

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

Financial statements are prepared on an accrual accounting basis (except for information related to cash flows).

Consolidated financial statements include the financial statements of the parent company and its subsidiaries. A subsidiary is an entity under the control of the parent company. Control exists when the parent company has the ability, directly or indirectly, to influence the financial and operational policies of the subsidiary in order to obtain economic benefits from these activities. When assessing control, consideration should be given to the potential voting rights currently in effect or those that may be transferred.

The business results of subsidiaries acquired or sold during the year are presented in the consolidated statement of business results from the date of acquisition or up to the date of sale of the investment in that subsidiary.

In cases where the subsidiary's accounting policy differs from the accounting policy applied uniformly within the Group, the subsidiary's financial statements will be appropriately adjusted before being used in the preparation of consolidated financial statements.

Balances on balance sheets between companies within the same Group, intercompany transactions, and unrealized intercompany gains arising from these transactions are excluded when preparing consolidated financial statements. Unrealized losses arising from intercompany transactions are also excluded unless the costs resulting from those losses are unrecoverable.

Non-controlling shareholder interests represent the portion of the subsidiary's profits and net assets not held by the parent company's shareholders and are presented in a separate section of the consolidated Statement of Income and the consolidated Balance Sheet. Minority shareholder interests include the value of minority shareholder interests at the date of the initial business combination and the minority shareholder's share of changes in equity since the date of the business combination. Losses corresponding to minority shareholder interests exceeding their share in the subsidiary's equity are deducted from the Group's interest unless the minority shareholder has a binding obligation and the ability to offset such losses.

2. Cash and cash equivalents

Money includes cash in hand, demand deposits, and monetary gold used as a store of value, excluding gold classified as inventory used as raw material for the production of products or goods for sale.

Cash equivalents are short-term investments with a redemption or maturity date of no more than 3 months from the date of purchase, easily convertible into a defined amount of cash, and with minimal risk involved in the conversion process.

3. Types of exchange rates applied in accounting and principles of accounting for exchange rate differences.

The company conducts transactions in foreign currencies, specifically USD.

Exchange rate differences arising during the period and exchange rate differences resulting from the revaluation of monetary items denominated in foreign currency at the end of the period are recognized as income or expense in the period. Exchange rate differences resulting from the revaluation of foreign currency-denominated balances at the end of the period are handled according to the guidelines of Circular No. 99/2025/TT-BTC dated October 27, 2025, of the Ministry of Finance.

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

Transactions denominated in foreign currency are converted using the exchange rate on the date the transaction occurs. The ending balances of monetary items denominated in foreign currency are converted using the exchange rate at the end of the accounting period.

Exchange rate differences arising during the period from foreign currency transactions of monetary items denominated in foreign currency, and exchange rate differences from the revaluation of monetary items denominated in foreign currency at the end of the period after offsetting increases and decreases, are recognized as financial operating revenue or financial expenses.

Specifically, during the investment and construction phase to form fixed assets before the Company commences production and business operations (pre-operation phase), exchange rate differences arising from the payment of monetary items denominated in foreign currency for investment and construction, and exchange rate differences arising from the revaluation of monetary items denominated in foreign currency at the end of the accounting period, are reflected cumulatively on the Balance Sheet (Exchange Rate Difference item). These exchange rate differences are gradually allocated to financial income or financial expenses over a period not exceeding 5 years from the date the project commences operation.

The exchange rate used to convert foreign currency transactions is the actual exchange rate at the time the transaction occurs, as stated by the commercial bank where the Company conducts the transaction. The exchange rate used to revalue the ending balances of monetary items denominated in foreign currency is the buying rate of the commercial bank or the average buying rate of commercial banks where the Company maintains accounts, as published on the last day of the accounting period.

4. Accounting principles for financial investments

Investments held until maturity

An investment is classified as held to maturity when the Company intends and is able to hold it to maturity. Investments held to maturity include: time deposits (including promissory notes and bills of exchange), bonds, preferred stock that the issuer is obligated to repurchase at a certain point in the future, and loans held to maturity for the purpose of collecting periodic interest, and other investments held to maturity.

Investments held to maturity are initially recognized at cost, including the purchase price and any transaction-related expenses. After initial recognition, these investments are recognized at their recoverable value. Interest income from investments held to maturity after the date of purchase is recognized in the Income Statement on an accrual basis. Interest earned before the Company takes possession is deducted from the cost at the time of purchase.

When there is conclusive evidence that part or all of the investment may be unrecoverable and the amount of loss can be reliably determined, the loss is recognized as a financial expense in the year and directly deducted from the investment value.

Investments in subsidiaries, joint ventures, and associated companies.

Subsidiary company

A subsidiary is a company under the control of a parent company. Control is achieved when the parent company has the ability to control the financial and operational policies of the investee company in order to obtain economic benefits from its activities.

Joint venture company

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

A joint venture company is a company established on the basis of a contractual agreement whereby the company and participating parties conduct economic activities under joint control. Joint control means that strategic decisions related to the operational and financial policies of the joint venture company must be made with the consensus of all participating parties.

Affiliated company

An associate company is a company in which the investor has significant influence but no control over its financial and operational policies. Significant influence is demonstrated by the right to participate in making decisions about the financial and operational policies of the investee company, but without controlling those policies.

Investments in subsidiaries, joint ventures, and associates are initially recognized at cost, including the purchase price or capital contribution plus any costs directly related to the investment. In the case of investments in non-monetary assets, the cost of the investment is recognized at the fair value of the non-monetary asset at the time of the investment.

Dividends and profits from periods prior to the investment being acquired are accounted for as a reduction in the value of the investment itself. Dividends and profits from periods after the investment is acquired are recognized as revenue. Dividends received in the form of shares are only tracked by the number of additional shares received, not the value of the shares received/recorded at par value.

Provisions for losses on investments in subsidiaries, joint ventures, and associates are established when the subsidiary, joint venture, or associate incurs losses. The provision amount is equal to the difference between the actual capital contributions of the parties to the subsidiary, joint venture, or associate and the actual equity multiplied by the ratio of the Company's capital contribution to the total actual capital contributions of the parties to the subsidiary, joint venture, or associate. If the subsidiary, joint venture, or associate is subject to consolidated financial statements, the basis for determining the provision for losses is the consolidated financial statements.

Increases or decreases in the provision for investment losses in subsidiaries, joint ventures, and associated companies that need to be set aside at the end of the fiscal year are recognized as financial expenses.

5. Trade receivables and other receivables

Trade receivables and other receivables are recognized at their actual cost. Receivables are presented at their book value less any provisions for doubtful receivables.

The classification of receivables into customer receivables, intercompany receivables, and other receivables is carried out according to the following principle :

- Accounts receivable reflect trade-related receivables arising from purchase-sale transactions between the Company and buyers that are independent entities, including receivables for export sales consigned to other entities.
- Internal receivables reflect amounts receivable from subsidiary units that do not have legal personality and are accounted for as dependent entities.
- Other receivables reflect non-commercial receivables that are not related to purchase or sale transactions.

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

Provisions for doubtful receivables are established for each doubtful receivable based on the age of the overdue debt or the projected potential loss, specifically as follows:

- For accounts receivable that are overdue for payment:
 - 30% of the value for accounts receivable that are overdue from 6 months to less than 1 year.
 - 50% of the value for accounts receivable that are overdue from 1 year to less than 2 years.
 - 70% of the value for accounts receivable that are overdue for 2 years to less than 3 years.
 - 100% of the value for accounts receivable outstanding for 3 years or more.

For accounts receivable that are not yet overdue but are unlikely to be collected: a provision should be made based on the projected loss.

6. Principles of Inventory Recognition

Inventory is recorded at the lower of its original cost and its net realizable value.

The original cost of inventory is determined as follows:

- Materials and goods: include the purchase cost and other directly related costs incurred to bring the inventory to its current location and condition.
- Finished goods: includes the cost of raw materials, direct labor, and related manufacturing overheads, allocated based on normal operating levels.
- Work-in-progress production costs include only the cost of main raw materials, labor costs, depreciation costs of assets used in production, and general production costs related to production activities.

Net realizable value is the estimated selling price of inventory in the normal course of business less the estimated costs to complete and the estimated costs necessary for its sale.

Inventory values are calculated using the weighted average method and accounted for using the perpetual inventory method.

Inventory devaluation provisions are established for each inventory item whose original cost exceeds its net realizable value. For work-in-progress services, the devaluation provision is calculated separately for each service type with its own price. Increases or decreases in the balance of inventory devaluation provisions required at the end of the fiscal year are recorded in the cost of goods sold.

7. Principles for recognizing and depreciating fixed assets.

a) Principles for recognizing and depreciating tangible fixed assets.

Tangible fixed assets are represented at their original cost less accumulated depreciation. The original cost of a tangible fixed asset includes all costs incurred by the Company to acquire the tangible fixed asset up to the point it is ready for use. Costs incurred after initial recognition are only added to the original cost of the tangible fixed asset if these costs are certain to increase future economic benefits from the use of the asset. Costs that do not meet this condition are recognized immediately as expenses.

When a tangible fixed asset is sold or disposed of, its original cost and accumulated depreciation are written off, and any gains or losses arising from the disposal are recognized as income or expense for the year.

Tangible fixed assets are depreciated using the straight-line method based on their estimated useful life. The number of depreciation years for different types of tangible fixed assets is as follows:

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

<u>Type of fixed asset</u>	<u>No. 5</u>
Houses, buildings	10 – 25
Machinery and equipment	06 – 10
Transportation and transmission	06 – 08
Management equipment and tools	03-05
Other fixed assets	0 5

8. Intangible fixed assets

Intangible fixed assets are represented at their original cost less accumulated depreciation.

The initial cost of intangible fixed assets includes all expenses incurred by the Company to acquire the asset up to the point it is ready for use. Expenses related to intangible fixed assets that arise after initial recognition are recognized as production and business expenses in the period unless these expenses are directly related to a specific intangible fixed asset and increase the economic benefits derived from that asset.

When intangible fixed assets are sold or liquidated, the original cost and accumulated depreciation are written off, and any gains or losses arising from the liquidation are recognized as income or expenses in the year.

The Company 's intangible fixed assets include:

Land use rights

Land use rights encompass all actual costs incurred by the Company directly related to the land used, including: money spent to acquire land use rights, costs for compensation, land clearance, land leveling, registration fees, etc.

The Company 's land use rights are depreciated as follows:

- Legally acquired land: depreciation is calculated using the straight-line method based on the land lease period; land use rights without a time limit are not subject to depreciation.

Software program

Costs associated with computer software programs are not a component of the related hardware that is capitalized. The original cost of computer software is the total cost incurred by the Company up to the point of putting the software into use. Computer software is depreciated using the straight-line method over 5 years.

9. Accounting principles for deferred expenses

Prepaid expenses are recorded as actual expenses incurred but related to the business results of multiple accounting periods, and the transfer of these expenses to the cost of goods sold in subsequent accounting periods.

Tools and equipment

Tools and equipment already in use are allocated to costs using the straight-line method, with an allocation period of no more than 3 years.

High repair costs

Factory repair costs are allocated to expenses using the straight-line method, with an allocation period of no more than 3 years.

Trade advantage

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

Goodwill arising from a business combination resulting in a parent-subsidary relationship is amortized as an expense using the straight-line method over 10 years.

10. Accounting principles for liabilities

Accounts payable are tracked in detail according to payment terms, payers, currency type, and other factors as required by the business's management needs.

Accounts payable that meet the definition of monetary items denominated in foreign currency are revalued at the end of the period when preparing financial statements.

11. Principles for recording loans and financial lease liabilities.

The company must keep detailed records of the repayment terms of loans and financial leases. Loans with repayment periods exceeding 12 months from the date of the financial statements are presented as long-term loans and financial leases. Loans due within the next 12 months from the date of the financial statements are presented as short-term loans and financial leases for repayment planning purposes.

For finance lease liabilities, the total lease liability reflected on the credit side of account 341 is the total amount payable calculated as the present value of minimum lease payments or the fair value of the leased asset.

Loans and debts denominated in foreign currencies must be converted into the accounting currency unit using the actual exchange rate at the time of the transaction;

- When repaying loans in foreign currency, the debit side of account 341 is converted according to the actual accounting exchange rate for each specific entity;
- When preparing financial statements, the balances of loans and financial leases denominated in foreign currency must be revalued at the actual exchange rate at the time of preparing the financial statements.
- Exchange rate differences arising from the settlement and end-of-period revaluation of loans and financial leases denominated in foreign currency are accounted for as financial operating revenue or expense.

12. Construction in progress costs

Construction in progress costs reflect the costs directly related (including relevant interest expenses in accordance with the Company's accounting policy) to assets under construction and machinery and equipment under installation. These assets are recorded at their original cost and are not depreciated. This is to serve the purposes of production, leasing, and management, as well as the costs associated with ongoing repairs to fixed assets.

13. Liabilities and payables

Liabilities and accrued expenses are recognized for amounts due in the future relating to goods and services received. Accrued expenses are recognized based on reasonable estimates of the amounts due.

The classification of payables into accounts payable to suppliers, accrued expenses, intercompany payables, and other payables is carried out according to the following principles:

- Accounts payable to suppliers reflect commercial liabilities arising from transactions involving the purchase of goods, services, and assets from suppliers that are independent entities from the Company, including liabilities incurred when importing through an authorized agent.

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

- Accrued expenses reflect amounts payable for goods and services received from sellers or provided to buyers but not yet paid due to the lack of invoices or insufficient accounting records, as well as amounts payable to employees for vacation pay and production and business expenses that must be accrued in advance.
- Internal payables reflect liabilities between a parent unit and a subordinate unit that does not have legal personality and is accounted for as a dependent entity.

Other payables reflect non-commercial liabilities that are not related to transactions involving the purchase, sale, or provision of goods or services.

14. Provisions for liabilities

Provisions are recognized when a company has a present liability (legal or contingent liability) resulting from an event that has occurred, the settlement of which would likely result in a decrease in economic benefits, and the value of that liability can be reliably estimated.

If the effect of time is material, the provision will be determined by discounting the future amount required to settle the debt obligation at the pre-tax discount rate and reflecting current market assessments of the time value of money and the specific risks of that debt. The increase in the provision due to the passage of time is recognized as a financing expense.

The Company's provisions for liabilities include:

Product and goods warranty reserve

Provisions for product warranty costs are established for each type of product or item that comes with a warranty.

product and goods warranties ranges from 0.5% to 1% of the revenue from those products and goods. This rate is estimated based on warranty expense data from previous years and a weighted ratio of all possible outcomes with corresponding probabilities. Increases or decreases in the amount of product and goods warranty provisions to be set aside at the end of the fiscal year are recorded as selling expenses .

15. Principles for recognizing equity

Owner's investment capital

Owner's equity is recorded based on the actual amount invested by shareholders.

Share premium

Share premium is recognized as the difference between the issue price and the par value of shares upon initial issuance, supplementary issuance, or the difference between the reissue price and the book value of treasury shares. Direct costs related to supplementary share issuance and reissue of treasury shares are recorded as a reduction in share premium.

Other capital belongs to the owner.

Other capital is formed by supplementing income from business operations, revaluation of assets, and the remaining fair value of assets received as gifts, donations, or sponsorships, after deducting any applicable taxes (if any) related to these assets.

Treasury stock

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

When repurchasing shares issued by the Company, the payment, including transaction-related costs, is recorded as treasury stock and reflected as a reduction in equity. Upon re-issuance, the difference between the re-issuance price and the book value of the treasury stock is recorded under the Shareholder Surplus item.

Undistributed profits

Record the business results (profit, loss) after corporate income tax and the situation regarding profit distribution or loss handling of the enterprise.

Other funds

Funds are established and used in accordance with the Company's Articles of Association and the resolutions approved annually by the General Meeting of Shareholders.

16. Profit distribution

Profits after corporate income tax are distributed to shareholders after the allocation of funds in accordance with the resolutions of the Company's General Meeting of Shareholders and the provisions of the law.

The distribution of profits to shareholders takes into account non-monetary items within undistributed after-tax profits that may affect cash flow and dividend payment capacity, such as: Interest from the revaluation of assets contributed as capital, interest from the revaluation of monetary items, financial instruments, and other non-monetary items.

Dividends are recognized as liabilities when approved by the General Meeting of Shareholders.

17. Principles and methods of revenue recognition

Revenue from the sale of goods and finished products.

Revenue from the sale of goods and finished products is recognized when the following conditions are simultaneously met:

- Businesses have transferred most of the risks and benefits associated with ownership of products or goods to the buyer.
- The business no longer holds the right to manage the goods as the owner or the right to control the goods.
- Revenue figures are determined with relative certainty. When a contract stipulates that the buyer has the right to return the purchased product or goods under specific conditions, revenue is only recognized when those specific conditions no longer exist and the buyer no longer has the right to return the product or goods (except in cases where the customer has the right to return the goods in exchange for other goods or services).
- The business has obtained or will obtain economic benefits from the sales transaction.
- Identify the costs associated with the sales transaction.

Revenue from providing services

Revenue from a service transaction is recognized when the outcome of that transaction can be reliably determined. If the service is performed over multiple periods, revenue recognized in the period is based on the portion of work completed as of the end of the accounting period. The outcome of a service transaction is determined when all of the following conditions are met:

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

- Revenue is determined with relative certainty. When the contract stipulates that the buyer has the right to return the purchased service under specific conditions, revenue is only recognized when those specific conditions no longer exist and the buyer no longer has the right to return the service provided.
- There is potential to obtain economic benefits from the transaction of providing that service.
- Determine the portion of work completed by the end of the fiscal year.
- Identify the costs incurred for the transaction and the costs to complete the transaction for providing that service.

Interest

- Interest is recognized on an accrual basis, determined by the balances of deposit accounts and the effective interest rate for each period.

18. Accounting principles for revenue deductions

Revenue deductions include: trade discounts, sales allowances, and returned goods.

Trade discounts, sales price reductions, and returned goods arising during the same period as the consumption of products, goods, and services are adjusted downward the revenue of the period in which they arise.

In cases where products, goods, or services have been consumed in previous periods, and trade discounts, sales price reductions, or returned goods arise in subsequent periods, the enterprise may record a reduction in revenue according to the following principle:

- + If products, goods, or services consumed in previous periods require price reductions, trade discounts, or returns in subsequent periods, but this occurs before the issuance of the financial statements, the accountant must treat this as an adjustment event arising after the balance sheet date and record a reduction in revenue in the financial statements of the reporting period (previous period).
- + In cases where products, goods, or services are subject to price reductions, trade discounts, or returns after the issuance of the financial statements, the enterprise shall record a reduction in revenue for the period in which the transaction occurred (the subsequent period).

19. Principles of cost of goods sold accounting.

The cost of goods sold during the year is recorded in accordance with the revenue generated during the period and in compliance with the prudence principle.

For direct material costs exceeding normal consumption levels, labor costs, and fixed manufacturing overhead costs not allocated to the value of goods in inventory, accountants must immediately include them in the cost of goods sold (after deducting any compensation, if any), even if the products or goods have not yet been identified as sold.

The provision for inventory devaluation is included in the cost of goods sold based on the quantity of inventory and the difference between the net realizable value and the original cost of the inventory. When determining the quantity of inventory devaluation for which a provision needs to be made, accountants must exclude inventory for which sales contracts have been signed (with a net realizable value not lower than the book value) but have not yet been delivered to customers, if there is conclusive evidence that the customer will not abandon the contract.

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

20. Principles of accounting for financial expenses

This reflects financial operating expenses including expenses or losses related to financial investment activities, lending and borrowing costs, joint venture and associate capital contribution costs, short-term securities transfer losses, securities sale transaction costs; provisions for impairment of trading securities, provisions for investment losses in other entities, losses arising from the sale of foreign currency, exchange rate losses, etc.

21. Accounting principles for selling expenses and administrative expenses.

Selling expenses reflect the actual costs incurred in the process of selling products, goods, or providing services, including costs of offering products, introducing products, advertising products, sales commissions, product warranty costs (excluding construction activities), storage, packaging, and transportation costs, etc.

Business management expenses reflect the general management costs of a business, including: salaries for management staff (wages, allowances, etc.); social insurance, health insurance, union fees, and unemployment insurance for management staff; office supplies, tools, and depreciation of fixed assets used for business management; land rent and business license tax; provisions for doubtful receivables; outsourced services (electricity, water, telephone, fax, property insurance, fire insurance, etc.); and other cash expenses (entertainment, customer conferences, etc.).

22. Current principles and methods for recording corporate income tax expenses.

Current corporate income tax expense

Corporate income tax expense is the current income tax, calculated based on taxable income. The difference between taxable income and accounting profit is due to adjustments for temporary differences between tax and accounting, non-deductible expenses, as well as adjustments for non-taxable income and losses carried forward.

The company is obligated to pay corporate income tax at a rate of 20%.

Deferred corporate income tax expense

Deferred income tax is corporate income tax payable or refundable due to temporary differences between the book value of an asset and a liability for financial reporting purposes and the income tax basis. Deferred income tax payable is recognized for all taxable temporary differences. Deferred income tax assets are only recognized when it is certain that taxable profits will be available in the future to utilize these deductible temporary differences.

The carrying value of deferred corporate income tax assets is reviewed at the end of the financial year and is written down to the extent that there is sufficient taxable profit to allow the use of part or all of the deferred income tax asset. Previously unrecognized deferred corporate income tax assets are reviewed at the end of the financial year and recognized when there is sufficient taxable profit to allow the use of these previously unrecognized deferred income tax assets.

Deferred income tax assets and deferred income tax liabilities are determined at the tax rate expected to apply in the year the asset is recovered or the liability is settled, based on the tax rates in effect at the end of the financial year. Deferred income tax is recognized in the Statement of Income and is only directly recorded in equity when the tax relates to items that are directly recorded in equity.

Deferred income tax assets and deferred income tax liabilities are offset when :

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

- The company has the legal right to offset current income tax assets against current income tax payable.
- assets and deferred income tax liabilities relate to corporate income tax administered by the same tax authority.

The company intends to settle its current income tax payable and current income tax assets on a net basis or by asset recovery concurrently with the settlement of liabilities in each future period when material amounts of deferred income tax payable or deferred income tax assets are settled or recovered.

23. Financial instruments

i. Financial assets

Classification of financial assets

The company classifies financial assets into groups: financial assets recognized at fair value through the Statement of Income, investments held to maturity, loans and receivables, and financial assets available for sale. The classification of these financial assets depends on the nature and purpose of the asset and is determined at the time of initial recognition.

Financial assets are recognized at fair value through the Statement of Income.

Financial assets are classified as fair value in the Statement of Income if they are held for trading or are classified as fair value in the Statement of Income at the time of initial recognition.

Financial assets are classified as securities held for trading purposes if:

- Purchased or created primarily for the purpose of short-term resale;
- The company intends to hold the shares for the purpose of short-term profit;
- Derivative financial instruments (excluding derivative financial instruments identified as a financial guarantee contract or an effective hedging instrument).

Investments held until maturity

Investments held to maturity are non-derivative financial assets with fixed or determinable payments and a fixed maturity date that the Company intends and is able to hold to maturity.

Loans and receivables

Loans and receivables are non-derivative financial assets with fixed or determinable payments and are not listed on the market.

Financial assets available for sale

Financial assets available for sale are non-derivative financial assets that are identified as available for sale or are not classified as financial assets recognized at fair value through the Statement of Income, investments held to maturity, or loans and receivables.

The initial book value of a financial asset.

Financial assets are recognized on the date of purchase and cease to be recognized on the date of sale. At the time of initial recognition, the financial asset is determined by the purchase price/issuance cost plus other expenses directly related to the purchase and issuance of that financial asset.

ii. Financial liabilities

The company classifies financial liabilities into groups: financial liabilities recognized at fair value through the Income Statement, and financial liabilities determined at amortized value. The classification of financial liabilities depends on the nature and purpose of the financial liability and is determined at the time of initial recognition.

NAGAKAWA GROUP JOINT STOCK COMPANY

Address : Xuan Thuong 1 Hamlet, Phuc Yen Ward, Phu Tho Province, Vietnam

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

Financial liabilities are recognized at fair value through the Statement of Income.

Financial liabilities are classified as fair value in the Statement of Income if they are held for trading or are classified as fair value in the consolidated Statement of Income at the time of initial recognition.

Financial liabilities are classified as securities held for trading purposes if:

- Released or created primarily for short-term acquisition purposes;
- The company intends to hold the shares for the purpose of short-term profit;
- Derivative financial instruments (excluding derivative financial instruments identified as a financial guarantee contract or an effective hedging instrument).

Financial liabilities are determined by their amortized value.

Financial liabilities are determined at their amortized value, which is calculated by subtracting principal repayments from the initial recognized value of the financial liability, plus or minus accrued amortizations calculated using the effective interest method of the difference between the initial recognized value and the maturity value, minus any reductions (directly or through the use of a reserve account) due to impairment or uncollectibility.

The effective interest rate method is a method for calculating the amortized value of a financial liability or group of financial liabilities and allocating interest income or interest expense over the relevant period. The effective interest rate is the discount rate applied to estimated future cash flows to be paid or received over the expected life of the financial instrument, or shorter, if necessary, back to the net present value of the financial liability.

The initial book value of financial liabilities.

At the time of initial recognition, financial liabilities are determined by the issue price plus any costs directly related to the issuance of that financial debt.

iii. Equity instruments

An equity instrument is a contract that demonstrates the remaining interest in the company's assets after deducting all obligations.

24. Departmental Report

A business unit is a distinctly identifiable part involved in the production or provision of products or services, and which has different economic risks and benefits than other business units.

A geographically specific segment is a distinctly identifiable part involved in the production or provision of products or services within a particular economic environment, and which experiences different economic risks and benefits than business segments in other economic environments.

25. Stakeholders

Parties are considered related if one party has the ability to control or exert significant influence over the other party in making decisions regarding financial and operational policies. Parties are also considered related if they are subject to common control or significant common influence.

When considering the relationship between the parties involved, the nature of the relationship is given more emphasis than its legal form.

Transactions with related parties during the period are presented in Note VIII.1.

CONSOLIDATED INTERIM FINANCIAL STATEMENTS

The first six months of the fiscal year ending December 31, 2026

Interim Financial Statements (continued)

3. Financial risk management

The Company's operations give rise to the following financial risks: credit risk, liquidity risk, and market risk. The Board of Directors is responsible for establishing policies and controls to mitigate these financial risks and for monitoring the implementation of the established policies and controls.

A. Credit Risk

Credit risk is the risk that one party to a contract will be unable to fulfill its obligations, resulting in financial losses for the Company.

The company's credit risks arise primarily from accounts receivable from customers, bank deposits, and loans.

Accounts receivable from customers

The company minimizes credit risk by only transacting with financially sound entities, requiring letters of credit or collateral for first-time transactions or those with unverified financial information. Additionally, accounts receivable staff regularly monitor accounts receivable to expedite collection.

The company's accounts receivable relate to many entities and individuals, therefore the concentration credit risk associated with accounts receivable is low.

Bank deposits

The Company's time deposits and demand deposits are held at well-known banks in Vietnam, therefore the credit risk associated with these deposits is low.

Loans

The company lends money to its subsidiaries and key management members. These entities and individuals have good reputations and repayment capabilities, so the credit risk associated with these loans is low.

B. Liquidity Risk

Liquidity risk is the risk that a company will have difficulty meeting its financial obligations due to a lack of funds.

The company's liquidity risk primarily arises from the fact that its financial assets and financial liabilities have mismatched maturity dates.

Liquidity risk management companies implement measures such as: regularly monitoring current and projected future payment requirements to maintain appropriate levels of cash and loans; and supervising actual cash flows against projected ones to minimize the impact of cash flow fluctuations. (Presentation of liquidity risk management policy)

The Board of Directors believes the risk to debt repayment is low. The company is capable of paying its due debts from operating cash flow and proceeds from maturing financial assets. The company has sufficient access to funding sources, and loans due within 12 months can be extended with existing lenders.

C. Market Risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in market prices.

Market risks associated with the Company's operations include: foreign exchange risk, interest rate risk, securities price risk, and commodity/raw material price risk.

Foreign exchange risk

Foreign exchange risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in exchange rates.

The company imports raw materials for production and exports products, primarily using USD and EUR as its main currencies, and is therefore affected by fluctuations in exchange rates.

The company manages exchange rate volatility risks by optimizing debt repayment terms, forecasting foreign exchange rates, maintaining a reasonable balance between foreign currency and VND borrowing and debt, selecting the right time to purchase and repay foreign currency when exchange rates are low, and optimally utilizing available funds to balance exchange rate risk and liquidity risk.

Risk related to commodity/raw material prices

The company faces risks related to fluctuations in commodity/raw material prices. The company manages this risk by closely monitoring relevant market information and conditions to effectively manage purchasing timing, production planning, and inventory levels.

The company has not used secured derivative instruments to hedge against commodity/raw material price risks.

The fair value of financial assets and financial liabilities is reflected at their transferable value in an existing transaction between parties who have full knowledge and willingness to transact.

The company uses the following methods and assumptions to estimate the fair value of its financial assets and financial liabilities:

- The fair value of cash and cash equivalents, accounts receivable, loans, other receivables, borrowings, accounts payable to suppliers, and other short-term payables is equivalent to the book value (less provision for estimated uncollectible amounts) of these items due to their short maturity.
- The fair value of investments held to maturity and financial assets available for sale listed on the stock exchange is the published trading price at the end of the accounting period. For investments held to maturity and unlisted financial assets available for sale whose trading prices are published by three securities firms at the end of the accounting period, the fair value of these investments is the average price based on the trading prices published by those three securities firms.
