Cambodia expansion to drive growth

We upgrade SBT from HOLD to BUY, raising our target price from 17,500 to 20,500. Our upward revision mainly reflects the company's plantation expansion in Cambodia which increases total sugarcane plantation area to 15,000 hectares, a 25% increase. We forecast revenue growth of 15% and net profit growth of 23% in 2013 thanks to the new plantation. We expect gross margins to increase by 200bp to 26% as SBT uses more in-house sugar instead of having to buy raw sugar inputs from others (which yields only 5% gross margins). Our target price does not include significant investments valued at VND190 billion in two sugar companies – La Nga Sugar (unlisted, 24.8% stake) and Bien Hoa Sugar (BHS, 22.7%) equal to an additional VND1,490/share.

We raise our DCF-derived target price to VND20,500 (25% upside – BUY). Although 1H2012 earnings results are weaker-than-expected (only 38% of our full year forecast), we think the Cambodia expansion is more material to our long-term view of the company's growth prospects and ultimately to our discounted cash flow derived target price. Assuming a long-term average sugar price of VND18,000/kg and gross margin of 26% (compared to a quarterly gross margin of 20.4%-41.7%), we estimate the company will generate free cash flow of VND382-582 billion for the FY12-FY16 period or about VND20,500/share. Given the stable cash flow, we think the company has room to raise their dividend from VND2,000/share to VND3,000/share or consolidate more sugar companies.

1H results fall short of our expectation. The company's 1H revenue increased by 16% yoy but net profit fell by 35% yoy, meeting 54% and 38% our full year forecast respectively. The numbers reflect an increase in volume sold but drop in selling price and rise in sugarcane input costs that squeezed gross margins down from 29% (FY2011) to 21% (1H2012). Accounting for these factors, we revise down our net profit forecast by 22% to VND414 billion (-25% yoy), leaving our revenue forecast unchanged at VND2,165 billion (+6% yoy). However, we forecast the company's revenue and net profit will bounce back in FY13, with revenue growth of 15% and net profit growth of 23%, mostly attributed to the new plantation in Cambodia.

Cambodia expansion: revenue driver and profit margin expander. The company expanded their plantation area by 3,000 ha in Cambodia. The plantation is strategically located near the company's processing factory in Tay Ninh and is ready for harvest in November. Sugarcane from the Cambodia plantation will be transported directly to the factory and will not be subjected to import taxes, only raw sugar (80% tax) and refined sugar (85% tax) are.

Figure 1: SBT's plantation area

| | 2010 | 2011 | 2012 | 2013 |
|----------------------------|--------|--------|--------|---------|
| Plantation area (ha) | 12,000 | 12,000 | 12,000 | 15,000 |
| Yield (tonne/ha) | 50 | 76 | 70 | 70 |
| Sugar output (tonne) | 53,346 | 77,791 | 74,048 | 92,560 |
| Raw sugar (tonne) | 6,234 | 21,788 | 27,000 | 27,000 |
| Sugar sales volume (tonne) | 59,268 | 98,490 | 99,698 | 118,210 |

Viet Capital Securities | 1

Societe De Bourbon Tay Ninh (SBT)

BUY

SBT has cleaned up their balance sheet. At the end of FY2011, the company had VND510 billion long-term investments (22% of total assets) in another listed sugar company Bien Hoa Sugar (BHS) and non-core investments in Bourbon An Hoa, Sacombank (STB), and Sacomreal (SCR).

In 1H2012, the company sold their entire investments in STB and SCR at a total profit of VND110 billion but sold Bourbon An Hoa at an estimated loss of VND103 billion, pocketing a net VND7 billion from the transactions. The company then bought a 24.8% stake in La Nga Sugar (small sugar producer with capacity of 2,500 tonnes/day, or about a quarter of SBT's own capacity). We think the liquidation of the non-core (but family-related) investments and purchase of interests in peers improves investors' perception of the company's corporate governance. The company bought the La Nga Sugar stake for VND61 billion, which translates to 2011 P/E of 6.9x and P/B of 1.6x. The company still retains a 22.7% stake in BHS.

Figure 2: Changes in SBT's long-term investments in VND billion

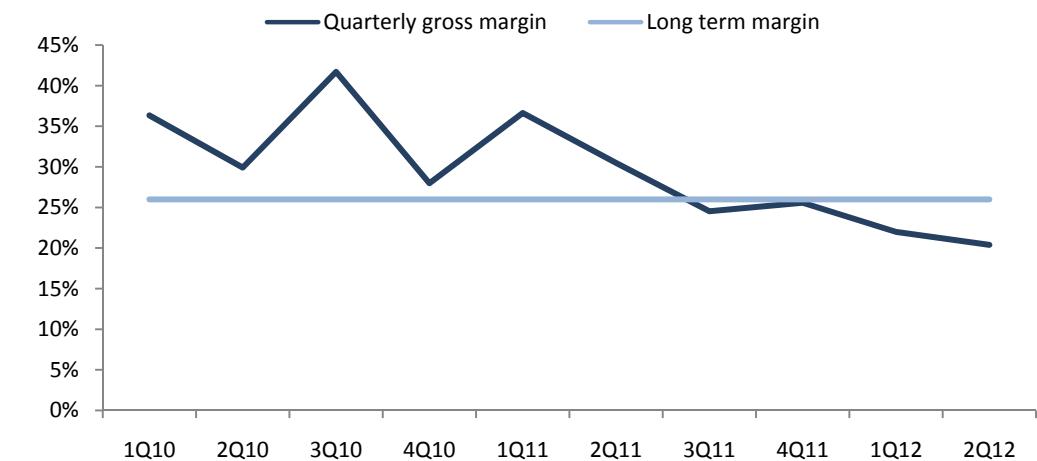

| | FY11 | 1H12 |
|----------------|------------|------------|
| Bourbon An Hoa | 245 | 0 |
| Bien Hoa Sugar | 129 | 129 |
| La Nga Sugar | 0 | 61 |
| STB | 106 | 0 |
| SCR | 30 | 0 |
| Total | 510 | 190 |

Source: SBT, VCSC

Valuation

We reiterate the DCF method as the valuation methodology to value the company's core business. Given the volatility of sugar price and the sugarcane price, we value the company on the assumption of long-term sugar of VND18,000/tonne. At this long term pricing assumptions, the long term gross margin is equivalent to 26%, which is lower than the company's historical average gross margin of 30% for period 1Q10 – 2Q12.

Figure 3: SBT's quarterly gross margin versus long term margin

Source: SBT, VCSC

Societe De Bourbon Tay Ninh (SBT)

BUY

Based on the above assumption, we forecast the company will generate VND382-582 billion for period FY12-FY16. The large cash flow results from i) increase in net profit (attributable to the new plantation in Cambodia) ii) a low capex plan, and iii) nominal changes in working capital. We derive a target price of VND20,500/share from our DCF valuation.

Analyst Certification

I, Huy Nguyen, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report. The equity research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues, which include revenues from, among other business units, Institutional Equities and Investment Banking.

VCSC Rating System and Valuation Methodology

Absolute performance, long term (fundamental) rating key: The recommendation is based on implied absolute upside/downside for the stock from the target price, defined as (target price – current price)/current price, and is not related to market performance. This structure applies from 1 November 2010.

| Equity rating key | Definition |
|-------------------|---|
| BUY | If the target price is 20% higher than the market price |
| ADD | If the target price is 10-20% higher than the market price |
| HOLD | If the target price is 10% below or 10% above the market price |
| REDUCE | If the target price is 10-20% lower than the market price |
| SELL | If the target price is 20% lower than the market price |
| NOT RATED | The company is or may be covered by the Research Department but no rating or target price is assigned either voluntarily or to comply with applicable regulation and/or firm policies in certain circumstances, including when VCSC is acting in an advisory capacity in a merger or strategic transaction involving the company. |
| RATING SUSPENDED | The investment rating and target price for this stock have been suspended as there is not a sufficient fundamental basis for determining an investment rating or target. The previous investment rating and target price, if any, are no longer in effect for this stock. |

Unless otherwise specified, these performance parameters only reflect capital appreciation and are set with a 12-month horizon. Future price volatility may cause temporary mismatch between upside/downside for a stock based on market price and the formal recommendation, thus these performance parameters should be interpreted flexibly.

Small Cap Research: VCSC Research covers companies with a market capitalisation of up to USD50mn, inclusively. Clients should note that coverage may not be consistent and that VCSC may drop coverage of small caps at any time without notice.

Target price: In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. The target price is the level the stock should currently trade at if the market were to accept the analyst's view of the stock, provided the necessary catalysts were in place to effect this change in perception within the performance horizon. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Valuation Methodology: To derive the target price, the analyst may use different valuation methods, including, but not limited to, discounted free cash-flow and comparative analysis. The selection of methods depends on the industry, the company, the nature of the stock and other circumstances. Company valuations are based on a single or a combination of one of the following valuation methods: 1) **Multiple-based models** (P/E, P/cash flow, EV/sales, EV/EBIT, EV/EBITA, EV/EBITDA), peer-group comparisons, and historical valuation approaches; 2) **Discount models** (DCF, DVM, DDM); 3) **Break-up value approaches** or asset-based evaluation methods; and 4) **Economic profit approaches** (Residual Income, EVA). Valuation models are dependent on macroeconomic factors, such as GDP growth, interest rates, exchange rates, raw materials, on other assumptions about the economy, as well as risks inherent to the company under review. Furthermore, market sentiment may affect the valuation of companies. Valuations are also based on expectations that might change rapidly and without notice, depending on developments specific to individual industries.

Risks: Past performance is not necessarily indicative of future results. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument mentioned in this report. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.
